

AI-Powered Employability Assessment Platform

Everything a developer needs to build this. There are eleven screens, a set of colours and fonts we stick to, a list of every reusable piece, and how it all behaves on a phone and a tablet.

VERSION

v2 · reviewed

SCOPE

Web and mobile

BUILT WITH

Streamlit

What the app does, in short

A student fills in their details and takes a test. We look at what they know, compare it with what companies are asking for in real job posts, and give them a score out of 100 — along with the reason for that score.

After that they get three things: a twelve-week study plan, a short list of certifications worth doing, and the jobs they are closest to getting. Teachers see the same information for the whole batch.

For now it covers Cloud Computing and Cybersecurity.

Where to start

Read the two pages that follow first. The Design System has the colours, fonts and sizes. The Component Library has every button, card and table already built. Once you have those, the screens should be straightforward to put together — you should never have to guess a colour or a size.

If a screen needs something that is not in the library yet, add it to the library first. That way the next screen can use it too, instead of someone building a slightly different version.

CONTENTS

01	Task 2 changes summary	What changed since version 1, and the feedback behind it	In this file
02	Design System	Colours, fonts, buttons, forms, badges, icons, cards, spacing, charts	In this file

Task 2 Changes Summary

What changed between the first version and this one. The workflow and the screens themselves were approved, so nothing there has moved – this round was about tidying up the design and getting it ready to build.

Version 2
6 August 2026

01 What we improved

Seven changes, all based on the review notes.

✓ **Built a proper Design System**
Colours, text sizes, spacing, icons, buttons, cards and chart styles, all written down in one place.

✓ **Built a Component Library**
Every button, card, table and chart is now a reusable piece, so the same element looks the same on every screen.

✓ **Made the screens consistent**
Same spacing, same corners, same text sizes and the same menu on all eleven screens.

✓ **Added phone and tablet layouts**
Showed what moves around at each screen size instead of leaving it to guesswork.

✓ **Gave every colour one job**
Purple for actions, green for done, orange for warnings, red for problems, blue for charts. Nothing is coloured just to look nice.

✓ **Made it easier to build**
Every component maps onto something Streamlit can actually do – columns, containers and expanders.

✓ **Standardised the navigation**
One menu, five versions of it for different screen sizes. Nothing has to be rebuilt per screen.

WHAT DID NOT CHANGE
The workflow, the eleven screens and the navigation order are exactly as approved. No screen was added, removed or reordered.

02 The feedback, and what we did about it

Five points came back from the review. Each one is answered here.

What the feedback said	What we changed	Where to find it
Make it more consistent	Fixed the colours, text sizes and spacing, and turned repeated elements into reusable components	Design System
It has to work on web and mobile	Added layouts for desktop, tablet and phone, showing what changes at each size	Responsive
Stop rebuilding the same UI	Built a library of every button, card, table and chart, ready to reuse	Components
Make it easier to implement	Kept every component to something Streamlit can build without workarounds	Components
The documentation needs to look professional	Restructured the whole pack – overview, system, components, layouts, screens	This pack

03 Version history

Where we are, and what came before.

Version	What it covered	Date	Status
Version 1	First set of UI mockups and the user flow, reviewed and approved	1 Aug 2026	Completed
Version 2	Design System, Component Library, responsive layouts and UI refinements	6 Aug 2026	Current

NEXT PHASE
Development

The design and documentation are done, so the next step is building it in Streamlit. We start with the reusable components from the library, then put the individual screens together on top of them, and connect the backend last.

Design System

The colours, fonts and sizes we use everywhere, so the website and the phone app look like the same product. Everything on this page is already used on a screen — none of it is just an idea.

9 sections

Locked · v2

01 Colours

Purple is the main colour. Every other colour has one job and is not used for anything else.

BRAND

Aa

Primary
#6C5CE7 · buttons, the page you are on, and the student's own data in charts

Aa

Secondary
#8B5CF6 · used with the primary in gradients, and for a second line on a chart

Aa

Gradient
Only on the score card and progress bars — nowhere else

Aa

Analytics
#3B82F6 · charts and "just so you know" messages

STATUS

Aa

Success
#22C55E · finished, passed, already good enough

Aa

Warning
#F59E0B · running late, half done, worth looking at

Aa

Error
#EF4444 · missing skills, errors, and anything that deletes something

SURFACE AND TEXT

Aa

Background
#F8FAFC · the page behind the cards

Aa

Surface
#FFFFFF · the cards themselves

Aa

Text primary
#111827 · titles and big numbers

Aa

Text secondary
#6B7280 · small print and hints

BORDER
#E5E7EB

One border colour for everything — cards, input boxes, table lines and dividers. When you put text on a coloured background, use the dark version of that same colour (dark green on light green, and so on). The bright version is too hard to read.

02 Text sizes

One font, six sizes, four weights. Nothing outside this list.

Display

32px · the name of the page

Heading

28px · big headings

Sub heading

24px · section titles

Section title

20px · the title on a card

Normal text — sentences, buttons and form boxes

16px · use this unless there is a reason not to

Small print — hints and labels. Nothing is ever smaller than this.

14px · the smallest we go

Regular

400 · normal sentences

Medium

500 · labels and table rows

Semi bold

600 · headings and buttons

Bold

700 · big numbers, and nothing else

ABOUT THE FONT

The screens are already built in Poppins, so that is what this page shows. If we want to switch to Inter instead, that is fine — but the screens and this page have to change together, or they will not match.

Design System

Buttons, form fields and status badges.

48px
between big sections

12px
every rounded corner

Soft shadow
Very light — cards should sit, not float

09 Charts

Six chart types, and when to reach for each one.

Gauge

For one important number out of 100. Only one per screen.

Radar

To compare a student against a job. Six points maximum, two shapes.

Bar

To compare things. Always put the biggest first, not A to Z.

Line

For anything changing over time. Only shade under the student's own line.

Progress

A bar or a ring for one percentage. Use the ring when space is tight.

Pie

Four slices at most. Any more and it is easier to read as bars.

Component Library

Every button, card, table and chart used in the app, in one place. Build the screens from these instead of making new ones. If you need something that is not here, add it here first so the next person can use it too.

11 sections

11 Rules to follow

Six rules. Following these matters more than any single component above.

Check here before building anything

If something close already exists, use it. Two cards that are almost the same but slightly different is a mistake, not a choice.

Same corners, same shadow

12px corners and the soft shadow, on everything. Only progress rings and profile pictures are circles.

Use the spacing sizes

8, 16, 24, 32 or 48. Nothing in between — if 20 feels right, pick 16 or 24 instead.

Use the six text sizes

32, 28, 24, 20, 16 or 14. Never smaller than 14, on any screen.

Each colour has one meaning

Purple means action, green means done, orange means careful, red means problem, blue is for charts. Never pick a colour just because it looks good.

Keep it easy to build

Everything here can be made with Streamlit's columns, containers and expanders. Avoid animations — the page reloads on every click and they will not survive it.

WHAT MOVES AROUND

Same design, three sizes

I have not drawn three separate designs here. The same components just rearrange themselves, and nothing gets dropped on a smaller screen — it stacks instead.

1440px768px390px

Desktop

1440px

- 1 Sidebar in full, with labels and badges
- 2 Up to four cards across
- 3 Charts sit side by side and tables show every column
- 4 Buttons only as wide as their label needs

Tablet

768px

- 1 Sidebar shrinks to a narrow rail of icons
- 2 Two cards across, metrics in a 2x2 block
- 3 Charts stack up but keep their full width
- 4 Tables scroll sideways rather than shrinking the text

Mobile

390px

- 1 Sidebar moves behind a hamburger, and the five screens students open most get a bar along the bottom
- 2 Everything drops to a single column
- 3 Charts shrink to fit the screen width
- 4 Buttons go full width and 48px tall, so they are easy to hit
- 5 Tables turn into stacked cards, since no table reads well this narrow

ACCESSIBILITY
True at every size

44px touch targets
Nothing tappable is smaller than a thumb

14px text floor
Body copy is 16px, and nothing anywhere goes below 14px

Never colour on its own
Every status has a word next to it, not just a colour

Visible focus ring
A 3px purple halo, so keyboard users can see where they are

Question 12 of 30

40% complete

9 Answered

2 Flagged

19 Left

Identity & access

Medium

Single choice

Flag to come back to

A team needs an application running on EC2 to read objects from a single S3 bucket, with no long-lived credentials stored on the instance. What is the correct approach?

A

Store an access key and secret in an environment variable on the instance

B

Attach an IAM role to the instance with a policy scoped to that bucket

C

Make the bucket public and restrict access by IP address

D

Create an IAM user per instance and rotate the keys weekly

How sure are you?

Be honest — it helps us judge how reliable your score is
